DESCRIPTION

General description

The CryoStor CS2, CS5, and CS10 family of preservation solutions represents the next generation of cryopreservation media. Designed to prepare and preserve cells in ultra low temperature environments (−80 to −196 °C), CryoStor media provide a safe, protective environment for cells and tissues during thefreezing, storage, and thawing process. Through modulating the cellular biochemical response to the cryopreservation process, these media provide enhanced cell viability and functionality, while eliminating the need to include serum, proteins, or high levels of cytotoxic agents.

CryoStor CS2, CS5, and CS10 are a series of cell specific, optimized preservation media, uniquely formulated to address the molecular biological aspects of cells during the cryopreservation process; thereby, directly reducing the level of Cryopreservation-Induced Delayed-Onset Cell Death and improving post-thaw cell viability and function.

These media are recommended for the preservation of stem cells, hepatocytes, tissue samples, and other extremely sensitive cell types.

Application

CryoStor, a series of cell-specific, optimized preservation media, is uniquely formulated to address the molecularbiological aspects of cells during the cryopreservation process thereby directly reducing the level of Cryopreservation-Induced Delayed-Onset Cell Death and improving post-thaw cell viability and function.

CryoStor® cell cryopreservation media has been used in:

- the preservation of T cells[1]
- the preservation of human induced pluripotent stem cell-derived cardiomyocytes (hiPSC-CMs)
- hiPSC-derived cardiac progenitors (hiPSC-CPs)[2]
- as a component of cryoprotective solution composed of bovine albumin[3]

Other Notes

Formulation contains 10% DMSO.

Legal Information

CryoStor is a registered trademark of BioLife Solutions, Inc.

1 answer

Dear, I am interested in buying the Cryostor CS10, 100 ml (C2874). I am wondering if the product packaging is a bag or a bottle. I can't find the information on the website. In advance, thank you for your answer. Best regards.

Technical Support · 11 months ago

This is packaged in a glass bottle with a polyethylene cap.

1 answer

Are there any publications available on using product C2874 for freezing human blood neutrophils? What are the viability and functions of frozen neutrophils after thawing?

Technical Support · a year ago

For information on the viability of neutrophils after freezing and thawing with this product, the following publication can be useful:
Title: An easy and reliable whole blood freezing method for flow cytometry immuno-phenotyping and functional analyses
Journal: Cytometry B Clin Cytom. 2021 Nov;100(6):652-665
DOI: 10.1002/cyto.b.21994

Published: Epub 2021 Feb 5
